

a GREEN · V partner

Australasia's largest **commercial greenhouse builder**

Apex Greenhouses has been building premium commercial greenhouses throughout Australia and New Zealand for more than 40 years - protecting produce being grown in the intense heat of an Australian summer or from the snowfalls on the Canterbury Plains.

Locally based

Apex Greenhouses has specialised in commercial greenhouse design and construction since establishing a presence in New Zealand in the 1970s.

Our budding business expanded into exports across the Tasman in the 1990s, recognising the growing need for premium glasshouses in Australia.

We now call both Australia and New Zealand home - with offices in both countries - and local know-how no matter where you'd like to build.

Boots on the ground

Our local teams will deliver you a world-leading greenhouse project, compliant with local regulations.

Apex Greenhouses has more than 40 years of experience in New Zealand markets and more than 25 years in Australia. We welcome competition as it pushes us to innovate as we custom build and improve how we work. We are proud to provide full-time work for local staff and ensure our skilled team is paid above industry-average salaries.

We will not compromise on safety or quality, whether our builds are large scale or boutique.

Solutions for all crop types

From vegetables to ornamentals, from superfoods to soft fruits, leafy greens and the most precious flowers, we provide integrated solutions for professional crop production.

Through hydroponics, channeling the sun and controlling climates, we design and build in any conditions for any produce.

Towards net zero

Sustainability is common sense - better growing outputs for fewer resource inputs.

Facing climate change, potential energy shortages, growing populations and food security challenges, we harness AI and smart tech to optimise growth.

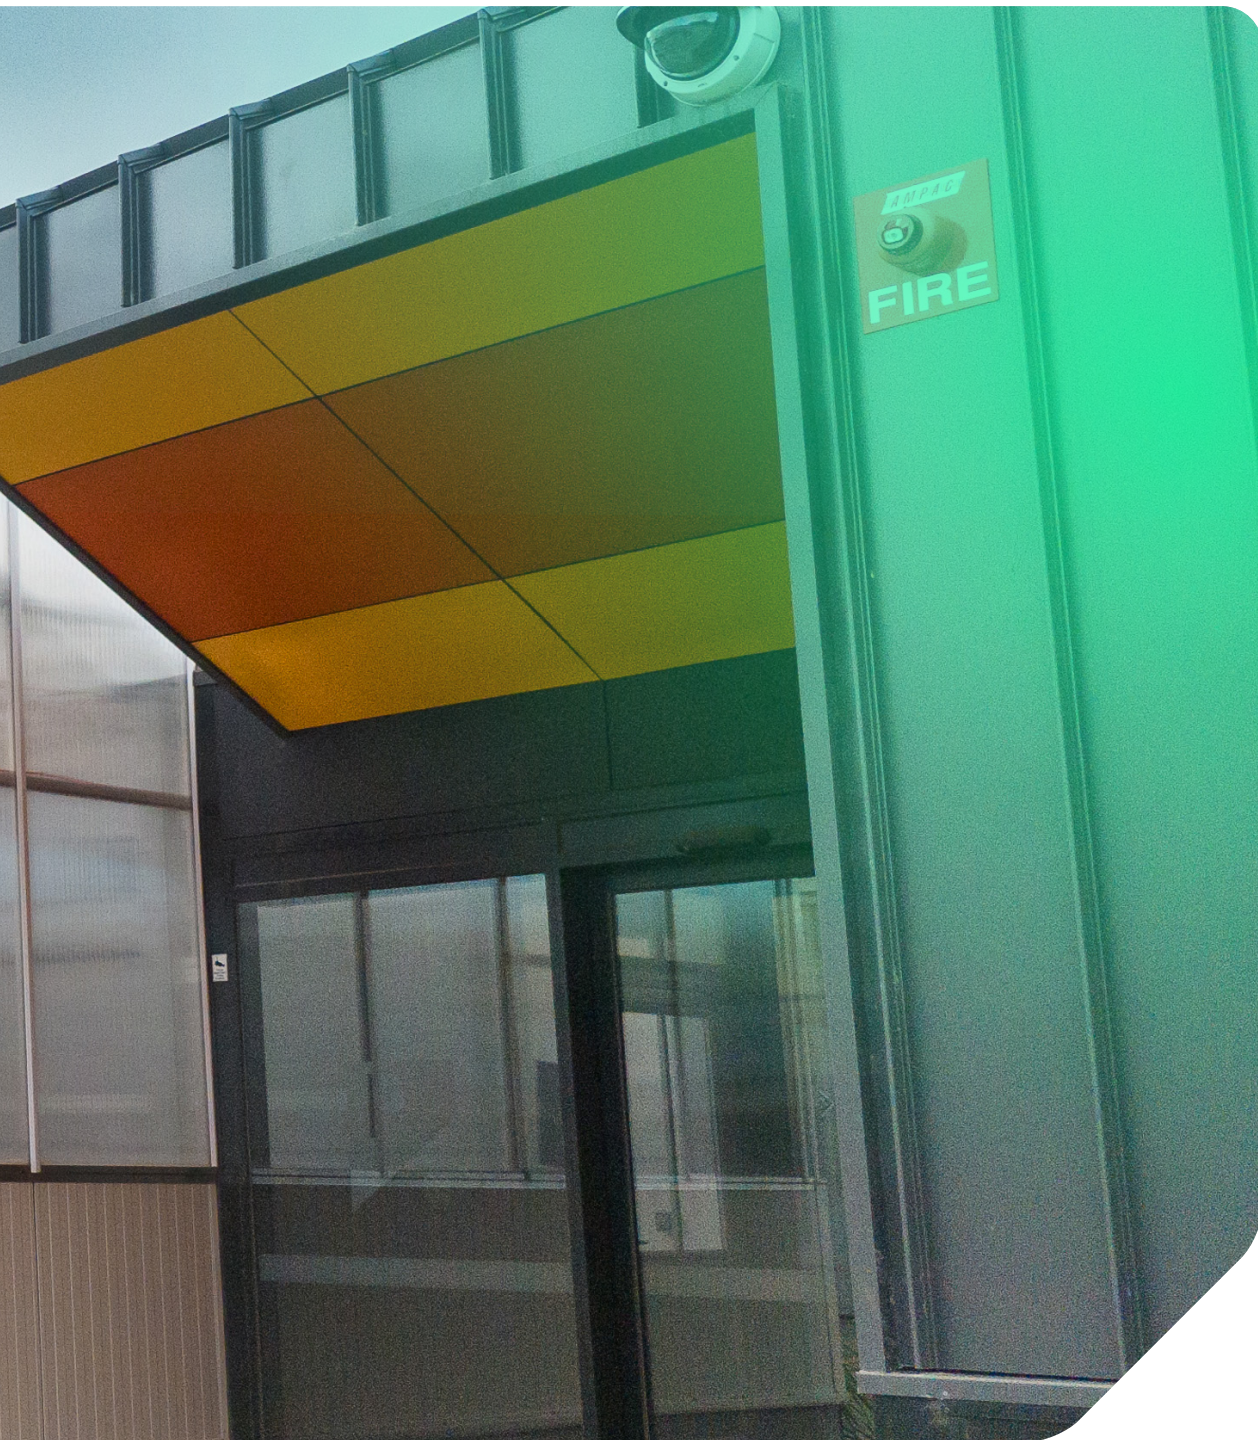

Greenhouses and effective hydroponics can help achieve sustainability.

Research to commercial

From smaller R&D facilities to large-scale commercial greenhouses featuring cooling and heating systems, wet walls, diffused glass and smart computer systems, we will design and build the most effective and efficient greenhouses to suit your needs.

“We’ve been building with Apex for most of the 30 years. We’ve always had a strong relationship, not also just in business, in general... it’s good to work with people in our time zone rather than European builders because you want problems fixed, you want to talk to people (immediately).”

– **Chris Millis** | Flavorite

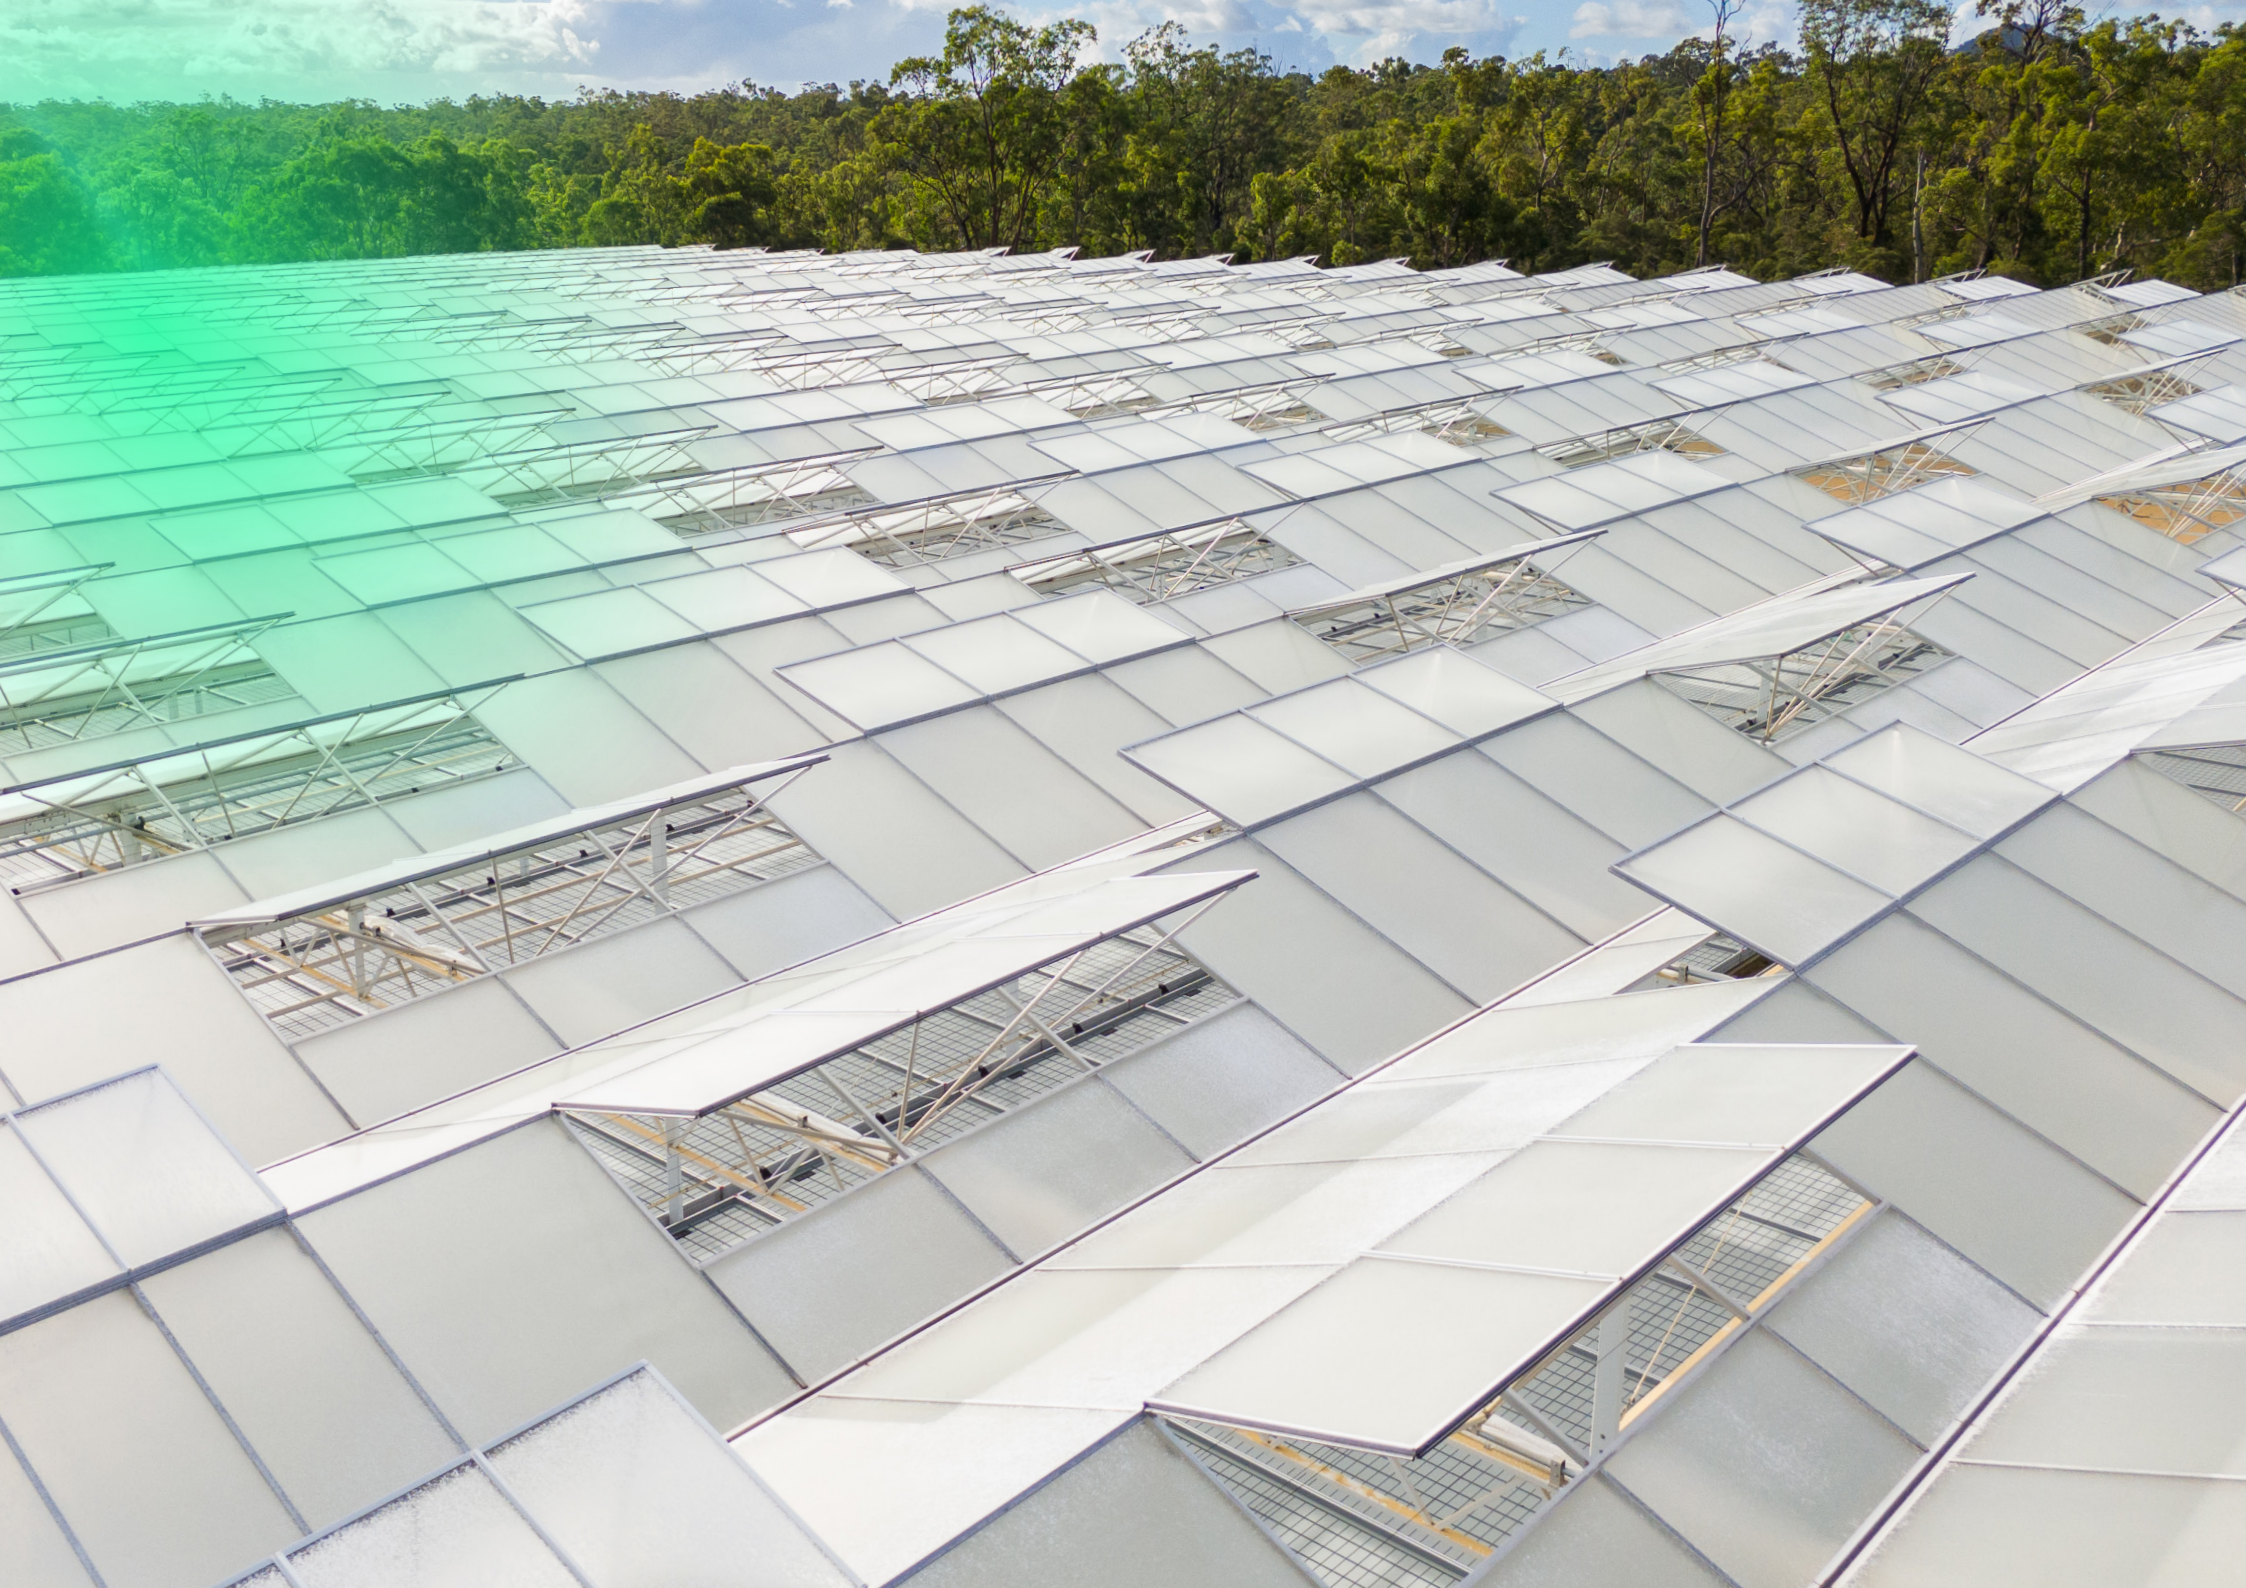

Backed by GreenV

Working with Dutch aggregator GreenV, which has a local presence in the most important CEA countries in the world, we have been developing a wider breadth of techniques and technologies.

We are at the forefront of AI and autonomous growing - benefitting from the most advanced systems in the world - allowing you to grow more safely, produce healthier crops and improve consistency.

“They are local, they do have boots on the ground. The competing companies... they don’t have a lot of local knowledge, particularly knowledge around the building regulations of Australia, and the requirements for visas for workers for example.”

– **Dr Jack Mooney** | Provenance Propagation

We make sense

Return on investment is essential when building a commercial greenhouse.

As Australia and New Zealand's largest greenhouse manufacturer, we can help you make the right project decisions.

Custom solutions

Our bespoke projects include:

- commercial glasshouses
- packing sheds
- R&D facilities
- botanic garden pavilions
- solar structures
- medicinal facilities
